

How to Make Video Calls

FaceTime (iPhone) and Google Meet (Android)

Reading time: about 4 minutes

On an iPhone: Using FaceTime

- 1 Open FaceTime.**
Find the green icon with a white video camera on your Home Screen and tap it.
- 2 Tap "New Call."**
This is usually near the top of the screen.
- 3 Type the person's name.**
Start typing their name, phone number, or email. When their name appears below, tap it.
- 4 Tap the video camera button to start the call.**
It will ring on their end, and their face will appear once they answer.

On an Android Phone: Using Google Meet

- 1 Open the Google Meet app.**
Look for a blue icon with a white video camera. If you don't have it, it's a free download from the Google Play Store.
- 2 Tap "New."**
This button is usually at the bottom of the screen.
- 3 Choose who to call.**
Search for their name in your contacts, or create a meeting link and send it to them by text message.
- 4 Tap "Call" to start the video call.**

A quick tip

Before you call, connect to Wi-Fi if you have it. Video calls use more data than texting, so Wi-Fi keeps your call free of extra charges and helps the picture look clearer.
